

Anything But Standard

More Than Just Bearings

STANDARD BEARINGS

a division of Weimer Bearing & Transmission, Inc.

ABOUT US

When the Industrial Revolution reached the shores of America, John M. Walton was there already waiting. Anticipating that the market for automobile and mechanized farm equipment would increase faster in Iowa than anywhere else, Walton moved to Des Moines in 1919 and founded Standard Bearings.

Walton taught flying in the Army Signal Corps during World War I and gave flight lessons and sight-seeing tours on weekends to finance the company.

As Walton's vision of increased demand for automotive and agricultural equipment came true, the company opened a second location in Sioux City, Iowa in 1928. Locations in Davenport, Mason City and Cedar Rapids followed shortly after.

Throughout the years, each generation has adapted, expanded and molded the company to capitalize on new opportunities, all staying true to Walton's vision: *To help customers succeed by meeting their needs with the highest value products and exceptional levels of service.*

In 2016, Standard Bearings joined forces with Weimer Bearing & Transmission, Inc., and is now part of a 20 location network of stocking warehouses, offices, machining facilities and assembly centers. The family of companies also includes a metal stamping and fabrication division, as well as full-service fastener procurement. Still an independent and family run organization, Standard Bearings is well poised to serve the industrial market.

WE ARE STANDARD BEARINGS

ANYTHING BUT STANDARD – MORE THAN JUST BEARINGS

Standard Bearings originated as a bearing distributor in 1919, but nearly 100 years since our inception, we are so much more than just bearings. We have transformed our company into a leading supplier of a vast array of products and integrated services – tailored to the unique needs of our customers.

GLOBAL REACH – LOCAL SERVICE

Nearly a century in business as an independent entity has allowed Standard Bearings to develop local and global sourcing solutions, as well as access to virtually any part, process, system, and sub-assembly. We combine global, local, and in-house resources with a proven business approach to assist our customers in reaching their business goals through a long-term and mutually beneficial relationship.
